

10. Planet Earth occupies some region around stars which is known as Goldilocks Zone. It is a region around star which is neither too hot nor too cold where planetary mass objects carries atmospheric pressure which helps to support liquid water. This system confirms option (c). Option (a) is incorrect as Goldilocks Zone is not in relevance with habitable zone as it serves as range of orbits around star where planetary surface support liquid water at required atmospheric pressure.
11. In the Namdapha National Park, located in Arunachal Pradesh, the climate varies from tropical to subtropical, temperate and arctic. It is tropical and subtropical in the southern region while it is of arctic type in the northern part of the park. The Khangchendzonga National Park lies in Sikkim, in the state of West Bengal has many ecosystems within itself from sub-tropical to arctic and subtropical and East-Himalayan to Alpine. Nanda Devi National Park is a national park situated around the peak of Nanda Devi (7816 m) in the state of Uttarakhand.
