water on other side of Earth protuberance outward. Hence we see that of the above options are correct, hence option (d) is correct.

16. Tropical Wet Evergreen Forests are rain forests that are found in places where there will be heavy rainfall and annual temperature varies from 25° to 27°C with average humidity above 78%. Evergreen forests are commonly found along Western Ghats from northeast to south-west across Arunachal Pradesh, Assam, Nagaland, Manipur, Mizoram, Tripura and parts of Andaman and Nicobar Islands. So with this, hence, 1 and 3 are correct, hence, correct option is (c). Tropical Wet Evergreen Forests are not found in Himachal Pradesh, so this eliminates options (b) and (d).
17. Countries having coastlines on Mediterranean Sea appears to be Albania, Algeria, Bosnia, Croatia, Cyprus, Egypt, France, Greece, Israel, Italy, Lebanon, Libya, Malta, Morocco, Monaco Montenegro, Palestine, Slovenia, Spain, Syria, Turkey and Tunisia. From the above list of countries, it is Jordan which has no opening at Mediterranean sea as it is surrounded by Syria and Israel, with this, option (b) is correct. Apart from Jordon, other South West Asian countries which does not open out on Mediterranean Sea are Iran, Armenia, Azerbaijan, Georgia, Qatar, Kuwait, Bahrain, Iraq, UAE, Saudi Arabia, Oman and Yemen.
18. Teak is a large deciduous tree that is around 130 feet tall having grayish brown branches that prefers moist and worm tropical climate and can handle extreme temperatures. It serves as pioneer species and are available in region having high rainfall of about 2000 mm. Teak tree is an important species of Tropical moist deciduous forests as it can sustain in extreme temperature and requires heavy rainfall of around 70-200 cm. The other species of this forest are Sandal wood, Shisam, Mahua, Sal and Bamboo, with this we see that option (a) is correct. Option (b) is incorrect as Tropical rain forest are areas with hot and wet climate. The examples of this are Banana Tree and Rubber Tree. Option (c) is incorrect as Tropical thorn scrub forest receives very less rainfall of about 80 cm. Option (d) is also incorrect as Temperate forest with grasslands has extreme temperatures which does not allow Teak plantation.
