Ganga with the aim of ensuring water quality and environmentally sustainable development.

NGRBA has been mandated as a planning, financing, monitoring and coordinating authority for strengthening the collective efforts of the Central and State governments for effective abatement of pollution and conservation of river Ganga so as to ensure that by the year 2020 no untreated municipal sewage or industrial effluent will flow into the river Ganga.

The authority is chaired by the Prime Minister and has as its members the Union Ministers concerned, the Chief Ministers of the States through which Ganga flows, vis., Uttarakhand, Uttar Pradesh, Bihar, Jharkhand and West Bengal, among others.

3. Neem oil acts as a 'nitrification inhibitor' when coated on urea. By slowing down urea hydrolysis and nitrification, it allows a more gradual release of nitrogen, which can be used by the plant. Neem-coating increases nitrogen use efficiency. Also, since the urea action is prolonged, the plants stay greener for a longer time. The other impacts of Neem Coated Urea are:
   - Improvement in soil health;
   - Reduction in costs with respect to plant protection chemicals;
   - Reduction in pest and disease attack;
   - An increase in yield of paddy, sugarcane, maize and soybean; and
   - Diversion of highly subsidised urea towards non-agricultural purposes negligible among farmers after the introduction of the mandatory policy of production and distribution of the only Neem coated urea.
4.
   - In order to safeguard and support the world's agri-cultural heritage systems, in 2002 FAO started an initiative for identification and the dynamic conservation of Globally Important Agricultural Heritage systems (GIAHS).
   - This GIAHS Initiative promotes public understanding, awareness, national and international recognition of Agricultural Heritage systems. Looking to safeguard the social, cultural, economic and environmental goods and services these provide to family farmers, smallholders, indigenous peoples and local
