Solar Power tariffs are determined either through the regulations of Central Electricity Regulatory Commission/State Electricity Regulatory Commission or through competitive bidding.

4. Excessive **sand mining** can alter the river bed, force the **river** to change course, erode banks and lead to flooding. It also destroys the habitat of aquatic animals and micro-organisms besides affecting groundwater recharge.
   In-stream **mining** lowers the stream bottom, which may lead to bank erosion. Depletion of **sand** in the streambed and along coastal areas causes the deepening of **rivers** and estuaries, and the enlargement of **river** mouths and coastal inlets. It may also lead to **saline**-water intrusion from the nearby sea.
5. Organic matter affects both the chemical and physical properties of the soil and its overall health.
   Increased levels of organic matter and associated soil fauna lead to greater pore space with the immediate result that water infiltrates more readily and can be held in the soil.
   Sulfur is one of three nutrients that are cycled between the soil, plant matter and the atmosphere. The sulfur cycle describes the movement of sulfur through the atmosphere, mineral and organic forms, and through living things.
6. As per the new mining law **— Mines and Minerals (Development and Regulation) Amendment Act, 2015** — non-coal mines have to be auctioned by the respective state governments. There are three gold mines in operational condition–Hutti and Uti in Karnataka and the Hirabuddini mines in Jharkhand. East Singhbhum, Jharkhand has one operational gold mine located in Kendrugocha, which is also of medium quality.

9. Scientists understand that Earth’s magnetic field has flipped its polarity many times over the millennia. The Earth formed approximately 4.5 billion years ago, along with the other seven planets in the solar system. As the Earth cooled, a primitive atmosphere was created by the out-gassing of early volcanoes. The early atmosphere contained no oxygen and would have been toxic to human beings, as well as most other life on Earth today.
