connected therewith. Control of illegal mining is, therefore, under the legislative and administrative jurisdiction of state governments.

2. As a result of good monsoon rainfall in the country, area coverage under Kharif crops has increased. The area under coarse grains is smaller than that of oil seeds and the area under sugarcane does not show a steadily increasing trend, rather fluctuates.
   According to the annual reports of 2017-18 and 2016-17 of Ministry of Agriculture and Farmers Welfare Government of India the chart of food grains productions in India, clarifies all the statements.

4. The Arctic and Antarctic Circles are located at ±66.5 degrees latitude. Note that 66.5 + 23.5 equals 90 degrees. This means that on 21 December when the Sun is directly over the Tropic of Capricorn at noon, it will not be visible from the Arctic Circle. So above the Arctic Circle, there is a period during the winter when the sun remains below the horizon. The same is true of the Antarctic Circle during Southern Hemisphere winter. On 21 June when the sun is directly over the Tropic of Cancer at noon, it is not visible from below the Antarctic Circle.
5. Aliyar, Isapur and Kangsabati are the water reservoirs.
   Around 18 reservoirs in India have water level below 50% of normal storage capacity. Of these, six reservoirs (Sholayar, Lower Bhawani, Vaigai, Mettur Stanley, Aliyar, Parambikulam) are in Tamil Nadu, three (Isapur, Yeldari, Pench (Totaladoh) in Maharashtra.
6. When **night** falls, the ground radiates the day's warmth into the skies. The ground becomes much cooler, causing the water vapour to condense. This condensed vapour is dew. On a **cloudy night**, the clouds send the heat back to the ground so the ground never gets cold enough for the dew to be **formed.**
