MGM HEALTHCARE: TRANSFORMING LIVES WITH ADVANCED REHABILITATION AND MULTI-VISCERAL TRANSPLANT PROGRAMME

PROFESSOR DR. ANIL VAIDYA,
CHAIRMAN, AND DIRECTOR OF THE INSTITUTE OF MULTI-VISCERAL TRANSPLANT AND ABDOMINAL TRANSPLANT, MGM HEALTHCARE

After carrying out several successful heart, lung and simultaneous heart- lung transplants, liver and kidney transplants, MGM Healthcare has recently started the Multi- Visceral Transplantation program. A robust clinical programme for pancreatic, intestinal, and multi-visceral transplant under the leadership of surgeon Professor Dr. Anil Vaidya, Chairman, and Director of the Institute of Multi-Visceral Transplant and Abdominal Transplant, MGM Healthcare, Chennai.

Multi-visceral organ transplant (Multi-Visceral Transplant) is the new frontier in global transplant programs, and MGM Healthcare, Chennai is performing life transforming transplants that can cure certain chronic lifestyle diseases and improve the quality of life of a patient. This new program extends hope to thousands of patients whose lives can now be saved with these procedures.

What is Multi-Visceral Transplant ?
Multi-Visceral Transplant involves replacing diseased or failing organs of the gastrointestinal tract such as liver, kidneys, Small bowels, pancreas, stomach and so on, with healthy organs from a deceased donor. This has been found to be very effective in patients with chronic diseases and those suffering from multi-organ failure and cancers of the GI tract.
The Multi-Visceral Transplant Team under the leadership of Professor Dr. Anil Vaidya, has successfully conducted pediatric kidney transplant from live donors, combined pancreas and kidney transplants in diabetes patients with end stage renal diseases, small bowel transplant in cancer patients, liver transplant from live donors and conducted several combined transplants in patients with multiple organ failure.

Total Parenteral Nutrition and Small Bowel Transplant:
The Institute of Multi-Visceral Transplant and Abdominal Transplant at MGM Healthcare offers comprehensive intestinal rehabilitation and transplantation in India, catering to patients with short bowel syndrome a condition that prevents the intestine from properly absorbing orally ingested nutrients and electrolytes. The centre offers a unique program for these patients called Total Parenteral Nutrition (TPN) a method in which complete nutrition is delivered intravenously to people who can't use their digestive systems at all. The Multi-Visceral Transplant team at MGM healthcare is specialized in stabilizing patients with short bowel syndrome. Once the patient is fit the small bowel transplant will be done using a donor organ.

Combined Kidney and Pancreas transplant for Kidney failure and type 1 diabetes
Combined pancreas and kidney transplants is a gold standard technique for diabetic patients who are on dialysis. Ideal candidates for this simultaneous transplant are patients suffering from type I diabetes mellitus with end stage renal disease and undergoing dialysis, selected type 2 diabetes mellitus, patients facing failure of insulin therapy for diabetes management and those suffering diabetes related metabolic complications like ketoacidosis, and hypoglycemic unawareness. Dr Vaidya has successfully conducted small bowel transplant and other GI surgeries with Success in patients suffering from gastrointestinal tract cancers such as neuroendocrine tumors, gastrointestinal tumors metastasizing in the liver, some cases of familial adenomatous polyposis and a rare kind of appendix cancer Called pseudomyxoma peritonei.
The Institute of Multi-Visceral Transplant Center at MGM Healthcare, with its dedicated and experienced team, provides comprehensive and patient-centered care throughout the entire transplantation journey. The center's expertise, combined with a multidisciplinary approach, ensures the best possible outcomes for patients with Type 3 Intestinal Failure requiring a multi-visceral transplant.
