From taking up the mantle of powering an emerging nation, enthusing and encouraging the dreams of a generation more than a 100 years ago, Tata Power today is rewriting the script, building further on its legacy of Clean Energy solutions and innovating toward providing full suite EAAS (energy as a service) solutions across the entire value chain.

As India advances towards its net-zero goals, Tata Power's pioneering spirit is leading the way. From an initial 16% in 2015, the company envisions 70% of their portfolio being clean and green by 2030 and becoming carbon neutral by 2045.

Tata Power is spearheading an ambitious project to set up 4 GW of solar cell and module manufacturing capacity in Tamil Nadu, which is due to be operational this financial year. In a major step towards ensuring reliable, round-the-clock supply, the company recently signed a MoU with the Government of Maharashtra to develop 2,800 MW of Pumped Hydro Storage Projects in Pune and Raigad districts. With a continuous focus on renewable capacity addition, the company's renewable capacity stands at 7.7 GW, with an installed capacity of 4.1 GW and over 3.6 GW of various projects under implementation. The Company is one of the leading solar rooftop solutions providers in India, with an installed capacity of almost 1,650 MW. The company's network is spread over 275 districts pan India.

Tata Power has customised solutions tailored towards enabling large enterprises to fulfill their RE100 commitments, including 100% green power, and multiple options to avail of round the clock renewable energy. Its services suite includes energy management and energy optimisation solutions for all sizes of commercial and industrial enterprises.

At the other end of the spectrum, Tata Power is on a unique mission to light up lives in remote and rural India through its Microgrids initiative. There are already 196 Microgrids in UP and Bihar, making a real difference to the economy of these areas and more planned in other parts.

Fuelling the EV revolution, Tata Power plans to expand its EV Charging points to 25,000+ in the next 5 years. The Company has already crossed the milestone of 50,000 home chargers; 4,370 public and semi-public charging points present in 390+ cities. It has also deployed 1,018 e-bus charging points across cities like Delhi and Bengaluru for a zero-emission public transport system.

Tata Power is painting a brighter, cleaner future for coming generations. Under it's Tree Mitra program, the company is planting seeds of hope, with over 1 million saplings planted till date. The Company is also on a mission to conserve, beginning with 69.7 billion liters in 2023, with a promise to respect every drop, and aim for complete water neutrality by 2030.

From 5.96 million tonnes in 2023, Tata Power aims to reach zero waste by 2030. It is their pledge to Mother Earth, promising her cleaner lands and happier habitats.

For more than 100 years, Tata Power has successfully undertaken many initiatives in the Western Ghats to protect the rich biodiversity found around its lakes. This includes the 'Act for Mahseer' program that has resulted in the Blue-Finned (Tor Khudree) – one of the two Mahseer species bred at Tata Power's Walvan Hatchery in Lonavala – being taken off the IUCN red list.

For Tata Power, empowerment goes far beyond power. The company has helped 3.7 million youngsters access quality education across 17 Indian states. It has also helped village youth find their first job and helped thousands of women setup their enterprises successfully.

Tata Power is striving to achieve 20% gender diversity by 2028, creating stories of empowered women reshaping the power sector. The 4 GW solar cell and module plant in Tamil Nadu will have 80% women on the shop floor. Tata Power is committed to high standards of Corporate governance. With a DJSI score of 67/100 in 2023, and an aim for 80/100 by 2027, Tata Power is committed to being a beacon of trust and responsibility for its stakeholders.
