bile Association of India. So, it's only natural that contactless payments are also gaining currency, especially after the pandemic.

WHAT INDIA NEEDS TO MASTER

Globally, new trends are emerging in the field. Biometric payments, for instance, which ensure a seamless and secure payment experience to customers. Per Digipay.guru, which provides digital payment solutions for a wide spectrum of industries, these payments use unique physical and behavioural characteristics of individuals, such as fingerprint, iris, face, voice and signature, to authenticate transactions. This eliminates the need for traditional authentication methods like PINs and passwords.

Other emerging trends that the Indian fintech firms need to look out for are embedded lending, an integration of lending services into the payment process, and 'buy now pay later', which allows customers to defer payment for their purchases, without the need for a traditional credit card. ■

THE CHANGE-MAKERS

easyrewardz™

EASYREWARDZ

- Came into being in 2011 with a vision to address the gap between the available CRM (customer relationship management) tools for businesses across industries
- It deploys customer lifecycle management solutions that engage with the customer and improve repeat sales
- Headquartered in Gurugram, with presence in Mumbai, Bengaluru, Kolkata and Dubai, it is also into brand advocacy and customer retention

Finly

FINLY

- Founded in 2015, with headquarters in Bengaluru, it provides a finance management and governance suite for businesses to automate, gain visibility and control accounts payable
- The platform comprises a scalable and intelligent expense management, e-procurement, vendor payment and budget management system
- The powerful policy engine, claims the firm, governs all business transactions and an integrated payment technology system, allowing automated reconciliations
