ELECTRIC VEHICLES

THE AGE OF THE EV

POWERED BY THE IMPERATIVE TO USE CLEAN ENERGY, ELECTRIC VEHICLES ARE THE FUTURE. INDIAN AUTOMOBILE MAJORS ARE REVVING UP THEIR ENGINES FOR A SMOOTH TRANSITION TO EVs

A modern metropolis teeming with vehicles... and all of it electric, with not a poisonous whiff of carbon monoxide clogging a single lung. That's an ideal vision leading everyone to bet big on Electric Vehicles (EVs), and that is due to the salutary role it is expected to play in the world's desperate move to tackle climate change. Electric vehicles emit fewer greenhouse gases and air pollutants than petrol/ diesel cars. In India, too, its importance arises from Prime Minister Narendra Modi's pledge in the COP26 climate change talks for India to be a net zero carbon nation by 2070, with carbon emissions to be reduced by one billion tonnes by 2030. The economic survey of 2023 projected that by the end of this decade India will have about 10 million electric vehicles (EVs)—a giant leap from less than a million EVs currently. It also suggested policies to accelerate
