Note : Circa 1814, the Bombay government decided to develop a new area at Kamatipura to meet the need for habitable space for the growing population. As the area faced acute shortage of water, two large water reservoirs were dug up and connected to the larger water tank in the area that had been built by Seth Cowasji Patel in 1780s at Khetwadi in Girgaum and named after him as Cawasji Patel tank (CP tank). But the arrangement of pipes worked only when the CP tank was full, leading to a crisis. It was another Parsi seth Framji Cawasji Banaji who saved the situation by sinking three wells and pumping water from these wells to the tanks by a Persian wheel run by bullocks and a steam engine. It was inaugurated on 17 May 1824. Centuries later, the areas, now beyond recognition, are still called Do Tanki and CP Tank.

[8] General Sir Arthur Thomas Cotton of the Madras Engineers KCSI (15 May 1803–24 July 1899) is the English stalwart known to have devoted his life to the construction of irrigation and navigation canals throughout British India. Captain Cotton experimented to upgrade and invent new uses of the machine, documented in detail by his daughter.
