to Panwell (the latter place is situated at the foot of the ghats on the Bombay river), from whence the cotton is conveyed by boat to Bombay.

The saving by boat to Panwell is some forty pc [50] as compared by rail. I had this week been to the south-eastern for the purpose of seeing what can be done to retain traffic by rail. I shall, I find, have to establish carting agencies same as on the Up district as well as appoint a person specially to solicit traffic and report as to what is being done at the various markets. [5 1]

Eventually, the bullock cart owners' protest died out, just like the strange rumours that had spread when the railways had first arrived. Trains were about speed, volume and faster delivery, and bullock carts were no match. Another battle was won. This was just fifteen years after the first run.

SHAITAN OF THE SCINDE

The 1860s were boom years for British engineers and contractors in India, John Brunton being one of them, with railway mania spreading far and wide. Brunton spent the years 1858 to 1864 building the Scinde Railway, a 173-km-long line from Karachi to Kotri on the Indus. [52] This was the first railway line to be laid in the areas that now comprise Pakistan. [53]

He wrote the story of his life dedicated to his seven grandchildren, in the hope that they would find it interesting and amusing. In his work, titled *John Brunton's Book: Being the Memories of John Brunton, Engineer , from a Manuscript in his Own Hand Written for his Grandchildren and Now Printed*, Brunton recalls an interesting anecdote during the Indian Mutiny that mentions how a mob of mutineers did not go near the steam locomotive, fearing it to be the devil, and threw stones at it from far away.

The natives of Scinde had never seen a locomotive engine, they had heard of them as dragging great loads on the lines by some hidden power they could not understand, therefore they feared them, supposing they moved by some diabolical agency, they called them Shaitan (or Satan). During the Mutiny, the mutineers got possession of one of the East Indian Line Stations where stood several engines. They did not dare to approach them but stood a good way off and threw stones at them. [54]

MANAGING WORKFORCE WITH A LUKRI (STICK)

While on the subject of Brunton, an interesting anecdote in his book about railway construction near Bhore Ghat between Bombay and Poona recalls how he had once overheard a conversation between the then Governor of
