APPS USED TO CREATE DEEPFAKES

CRAIYON
Previously called DALL-E Mini, Craiyon is an AI image generator that has taken the internet by storm. It has a user-friendly interface and can create images based on just textual descriptions

ZAO
The latest app for creating deepfake content in a matter of minutes. You can select a clip from its library, including scenes from famous films or series, and create a fake video

JIGGY
Lets you make deepfakes of GIFs or put yourself in any GIF you like. You just have to choose a photo of yourself and select a GIF of your choice

LENSA AI
It can create a photorealistic portrait from a few selfies. There are multiple formats available, such as superheroes, anime, and more

FACEMAGIC
An AI-based face swap app that lets you use a face of your choice in videos and images. The in-app feed also gives you prompts to perform face swaps

DEEPFAKES WEB
Lets you create deepfake clips on the web. The service uses deep learning to read face data. It can take up to 4 hours to learn from videos and images, and another 30 minutes to swap faces using a trained model

FACE SWAP LIVE
Not really a deepfake tool, but it lets you switch faces with your friends or a photo in videos. You can record videos, take photos, add stickers and post directly on social media

WOMBO
A lip-syncing app that lets you transform a picture of yourself or others into a singing face

FACEAPP
Generates realistic transformations of faces. It can, for example, add a smile, or show you what you'll look like when you are old

REFACE
Earlier called Doublicat, the app lets you make fun GIF memes. All you need to do is click a photo and choose a GIF of your liking

iary of a multinational firm by cloning the boss's voice made headlines. Recently, a US-based data analytics firm, New Kite Data Labs, claimed that a Beijing-based private AI firm, Speechocean, which has clients with ties to the PLA (People's Liberation Army of China), has been collecting voice samples from India, primarily from the sensitive border regions in Punjab and Jammu and Kashmir. Locals have apparently been hired to record pre-scripted words, phrases or conversations, which are then transferred to China-based servers. While the exact purpose of this data harvesting is unknown, it's enough cause for Indian policymakers to remain alert to propaganda. "Earlier,

> **DEEPFAKES GIVE NATIONS STRATEGIC ADVANTAGE IN WAR. ALL NATIONS WANT TO USE IT, SO NONE OF THEM IS INTERESTED IN CHECKING IT**

there was fake, now we have deepfake," says Gulshan Rai, former national cyber security coordinator of India. "Deepfake is dangerous for national security as it has the potential to create social disharmony and disturb public peace. All nations want to use it, so no one seems interested in keeping it under check. From political elections to wars, deepfakes are being used by everyone." In war especially, grey-zone tactics such as propaganda and disinformation are employed to derive strategic advantage, he adds. Doctored videos as a psychological tactic, for instance, were in circulation following the Galwan skirmish between Indian and Chinese soldiers in Ladakh in June 2020. "The use of disinformation can play a decisive role in any war without the use of actual force," Rai says. "What we are seeing in the Ukraine-Russia war and now in Gaza is just the beginning of modern warfare."
