What is Wrong to Eat

FRUITS

APPLES
- High in soluble fibre content
- Help control hunger pangs

CHERRIES
- High in vitamin C, serotonin and melatonin
- Improve insulin secretion

APRICOTS
- Have vitamins C and A, and potassium, copper and magnesium
- Can help with sugar cravings

AVOCADO
- Very low in sugar content, high in healthy fats
- Beneficial for skin, hair and brain function

ORANGES
- High in vitamins A and C
- Can help regulate blood sugar

SWEETS

Low-GI Indian sweets that diabetics can eat (though these must be prepared with minimal sugar and fat)

OIL

The ideal fat content includes a polyunsaturated fatty acids (PUFA) / saturated fat scale of 0.81-1.0, and linoleic (a type of Omega 6 fat) and alphalinolenic acid (a type of Omega 3 fat) of 5-10. To ensure such a balance, experts recommend changing oils every so often and blending oils

COCONUT, MUSTARD AND GROUNDNUT OILS
Ideal for everyday Indian cooking

OLIVE OIL
For sauteeing and low-temperature cooking

RICE BRAN AND SAFFLOWER OIL (70:30) BLEND WITH ADDED ANTI-OXIDANTS
Can improve lipid profile and certain inflammatory markers

CANOLA AND FLAXSEED OIL BLEND
Reduces overall cholesterol

SWEET KILLERS

Indian sweets with fat and sugar overload

HIDDEN SOURCES OF SALT

The Food and Drug Administration of the US recommends no more than 2,300 mg of sodium a day. Salt in chips or salted nuts is no secret, but here are other hidden sources of salt

- Papads
- Cold cuts, cured meats
- Processed cheese
- Salad dressings
- Pickles
- Breads
- Tinned/ packet soups
- Sauces
- Tinned fish or meat

THE TRUTH ABOUT OIL

When oil is heated beyond its smoke point, it releases harmful chemicals. In India, cooking oil is subjected to very high temperatures when deep-frying. Reusing oil also makes it more toxic
