

SHOCKING!

This is the Paraflex, our shock absorber introduced in 2005. It is an absolutely crucial element in the protection of our horological movements. One which we designed and manufactured solely ourselves. Its specific purpose is to neutralise any and all effects brought about by the knocks and bumps of everyday life. One may wonder how such a minuscule shield, no bigger than a grain of rice, could achieve such a feat? It is through the interaction of two separate properties which, in a never-ending dance, offset the consequences of all shocks at all times. The Paraflex moves one way, then the other, all within a fraction of a second. On the one hand, it bends at each impact to disperse the energy, then returns to its original shape. On the other, it displaces itself so as to preserve the functionality of the balance wheel and escapement anchor. Thus engaging the guarantee of the chronometric performance of the calibre in all circumstances. It is through this unique ballet of deformation and displacement that the Paraflex preserves the watch's movement with its own.
