KEEPING GREEN PROMISES

A boost to renewable energy production is an imperative with India setting a bold target of meeting 50 per cent of its power requirement from clean fuels by 2030

BHUPINDER SINGH BHALLA

AJAY MATHUR

The 28th Conference of the Parties to the UN Framework Convention on Climate Change, or the COP28, is being held in Dubai from November 30 to December 12. At this critical juncture, **Bhupinder Singh Bhalla**, secretary, ministry of new & renewable energy, and **Ajay Mathur**, director general, International Solar Alliance, discussed what India—having set some challenging renewable energy targets for itself—brings to the global table.

THE BOLD TARGETS

Bhalla: We have said that we would like to have 50 per cent of power capacity by 2030 from non-fossil fuels. The second commitment we have made is that the energy intensity of the economy would reduce by 45 per cent vis-a-vis the 2005 level by 2030. Apart from that, we've also announced that we would like to be energy independent by 2047 and we would like to achieve net zero emissions by 2070. So, these are the larger goals which kind of drive how we in the renewable energy sector function.... Currently, we have a non-fossil capacity of 186 GW installed in the country as on October this year. Our target is, and our honourable prime minister has also announced, to achieve 500 GW of renewable energy, of non-fossil capacity, in the country by 2030.

> **"Through the National Green Hydrogen Mission, our emphasis is to resolve any issues for firms who have invested in green hydrogen. This is to ensure that we have the most competitive green hydrogen cost in the world by 2030"**
