Green Energy & Mobility: Pioneering Sustainability

HITACHI
Inspire the Next

In India's quest for energy security and independence, Hitachi Energy has assumed a central role. It offers progressive digital and green energy solutions that support India in constituting flexible and smart grids, capable of meeting the nation's surging energy demands.

Distinguished long-transmission power projects such as Raigarh-Pugalur UHVDC[1] Link, North East-Agra Link, and Rihand-Dadri Link are testaments to Hitachi Energy's prowess in HVDC technology. These projects bolster the nation's power transmission and distribution networks, facilitating the transfer of power to regions where it is needed the most, thus contributing to the "Power for All" initiative and unlocking new avenues of growth.

Hitachi's unwavering commitment extends to aiding India in diversifying its energy portfolio, with a special emphasis on renewable energy sources. India aspires to achieve 500 GW of renewable energy by 2030 and attain Net Zero emissions by 2070.[2] Hitachi's avant-garde green energy portfolio is catalysing the ongoing green energy revolution in India, with solar farms illuminating the remotest corners and breathing life into countless lives.

Simultaneously, India is making remarkable strides in enhancing mobility for its citizens through visionary initiatives like the National Rail Plan 2030 and Vision 2024. The large-scale digital transformation of the Indian Railways, embracing electronic interlocking systems, digital signalling, and autonomous train operations, is ushering in world-class rail operations.

As a longstanding partner of Indian Railways, Hitachi Rail India is at the forefront of this transformation. It paves the way for "Green Railways," accelerating the modal shift towards greener rail transport, particularly through its partnership in landmark projects such as the Western Dedicated Freight Corridor (WDFC) including Electronic Interlocking and Train Protection & Warning System (TPWS) are infusing safety, speed, and resilience into the freight ecosystem. The journey involves not only eco-friendly rail transport but also the growth of underdeveloped regions and the promotion of greener railway systems for cargo movement across the country.

Powering state-of-the-art Metros, such as the Noida Metro, India's first[3] underwater metro project i.e. the Kolkata East-West Metro, along with Navi Mumbai and Mumbai Metro, Hitachi Rail is alleviating congestion in burgeoning industrial and economic centres. This paves the way for seamless commutes, low-carbon transport, and the sustainable growth of cities.

Connective Industries: Orchestrating Digital Transformation

Under the aegis of progressive initiatives like "Make-in-India" and "Aatmanirbhar Bharat," India is surging ahead in its adoption of Industry 4.0 technologies. The convergence of operational technology (OT) and information technology (IT) is driving India's transition into a leading industrial force and a global manufacturing powerhouse.

At the forefront of this transformation Hitachi plays the role of a catalyst, digitalizing a spectrum of industries encompassing water, steel, oil, and gas. The smart solutions deployed by Hitachi are accelerating sustainable transformations, enhancing access to clean drinking water, facilitating access to clean gas, and establishing a robust social infrastructure powered by energy-efficient and high-quality products like steel.

Through its Social Innovation Business, Hitachi in India is steering the nation's sustainable transformation, utilizing Digital, Green, and Innovation as the growth drivers. Hitachi stands ready to take on a proactive role in ensuring the collective prosperity of India's 1.4 billion citizens, propelling the nation towards global leadership across all facets of life.

Pioneering Innovations through Inspired R&D

Innovation is the cornerstone of India's sustainable transformation, and at the heart of this innovation is Hitachi India's R&D Centre. Working in concert with global R&D teams and diverse Hitachi businesses in India, the R&D division is driving social innovations to "Support people's quality of life with data and technology that fosters a sustainable society." Breakthroughs span across diverse domains, from Artificial Intelligence (AI), including Financial Services AI and Generative AI, to Green Mobility, Digital Security, Speech Acoustics & Video Analytics, and Smart City solutions. Hitachi's commitment to responsible AI for the greater good is evident through the establishment of the "Generative AI Centre." This centre will play a pivotal role in accelerating value creation and promoting the safe and effective use of Generative AI.
