INDO-JAPAN CONCLAVE 2023

ENERGY VISION PARTNERING FOR A NEW WORLD

MAKING OF A BIG ENERGY LEAGUE

India is committed to reducing its carbon emission by 45 per cent by 2030 while underlining clean energy partnerships with Japan

India has to fulfil its commitments to cut emission intensity by 45 per cent by 2030, eventually paving the way for achieving the long-term goal of reaching net zero by 2070. And to strengthen the foundation, Union minister for power, and new and renewable energy **R.K. Singh** said the country is expanding its footprint of energy generation via using solar and wind energies and building capacities and ecosystems for green hydrogen. Conventionally, Japan has remained interested in India's push for renewables and has been investing in equities and sharing big-ticket technologies. Here, the minister throws light on India's clean energy partnership with Japan, its commitment to cutting carbon emissions and expectations from the developed world.

COMMON STRATEGIC INTEREST

Japan is a close and valued partner. Our strategic interests coincide and we have the same worldview... I'm quite sure that Japanese investments in the energy sector will increase.

INDIA'S COMMITMENT

We had committed that we would cut our
