BUILDING A HEALTHIER INDIA

S GANESHPRASAD
Founder, MD & CEO, GenWorks Health

GenWorks is the first start-up in the Indian healthcare industry that is dedicated to improving healthcare access in India. We are a Wipro GE invested company to create a platform for solving the 3 fundamental challenges in Healthcare-Access, Affordability and Adoption : Awareness Our core purpose is to reach relevant and affordable technology to every corner of India and improve clinical outcomes to fulfil GE healthcare mission of @ work for healthier India.

GenWorks was primarily set up to take healthcare solutions beyond the metros to various tier-2 and tier-3 cities. As a pioneering health-tech company, give us an insight into how you have successfully used technology to improve healthcare access in India?

Genworks was created to execute the vision of GE healthcare to expand access and affordable care @ work for a healthier India. Clearly the vision was to solve for challenges and hurdles in delivering quality care. The major hurdle that we had to solve for was affordable care and specialist access. Our strategy of connected care by leveraging technology was the answer. We are working towards bringing in awareness & adoption.

Created as a platform for solving the three fundamental challenges in healthcare-access, affordability & adoption, give us a brief overview into the kind of services GenWorks Health has been successfully championing through the years?

To be efficient, healthcare must focus on prevention. Healthcare is prevention of what we can prevent as manifestation of the disease, or early diagnosis, and focused treatment to improve outcomes.

We had to face two significant challenges: Late treatment mindset of people; Availability of specialists

We had to convince the neighbourhood physicians & healthcare facility who are the first point of contact and the ones who determine the early outcomes to be aware of potential solutions at point of care. We have put together solutions for remote access & interpretation for quality diagnosis .Furthermore, we have worked with treatment facilities to be able to efficiently connect with the physician to provide reliable intervention for treatment when needed.
