

fog." According to a study published in the October 2021 issue of the journal *JAMA Network Open*, nearly one in four people who have had Covid suffer from problems in memory recall and memory encoding, while many also have symptoms of impaired processing speed and verbal fluency. "The condition might be short-term but it can damage quality of life," says Dr Srivastava. A study of 100,000 people by scientists at the University of Oxford and published in *Nature* in March

"Now it is clear that the virus can affect almost any organ, including the brain. We have seen a number of patients with brain fog"

Dr M.V. Padma Srivastava
Head of neurology and chief of the neurosciences centre at AIIMS, Delhi
