SAFETY IS KING

The Skoda Kushaq boasts excellent active and passive safety features to match the standards the brand has set with its products globally over the years

Simply Clever Simply Safe is Skoda's philosophy for its products globally, as well as for the Indian market. Having introduced Indian consumers to European build quality in 2001, Skoda has a reputation of retailing products that are made to last thanks to their superb tank-like feel. This no compromise approach aligns with the notion of #SAFERCARSFORINDIA with a wide array of active and passive safety features offered by the Skoda Kushaq. In a first for this segment in India, ESC comes as standard in all variants ensuring safe handling at all times. It also enables the use of the optional Hill-Hold Control feature. Standard safety features include rear parking sensors as well as a tyre pressure monitoring system that warns the driver in case the air pressure in the tyres needs correction. Also offered as standard are ISOFIX anchors and top tether anchor points to firmly secure child seats. The Multi-Collision Brake prevents potential follow-on collisions by automatically bringing the Kushaq to a standstill while the occupants within the cabin are protected by up to six airbags. All five seats feature three-point seat belts and height-adjustable headrests. Making driving and parking the Kushaq convenient is cruise control as well as rain-sensing wipers and automatic headlamps. Besides the rear parking sensors that are offered as standard, from Ambition upwards, it also gets a rear-view camera which shows the distance to potential obstacles and guiding lines for orientation. These active and passive safety features make the Skoda Kushaq the king of safety.

FEATURES WHICH KEEP YOU SAFE

ABS: Anti-lock braking system
EBD: Electronic Brake force distribution
BA: Brake assists
