

OPEN RANGE

EV manufacturers have taken it upon themselves to eliminate the biggest challenge in pushing for electric cars—range anxiety. Mercedes-Benz is one such manufacturer discovering new frontiers with its electric technology. Its **Vision EQXX** beat its previous record of 1,008 km, with a 1,202 km record run from Stuttgart to the Silverstone Circuit in the UK. Boasting an extremely low Cd (drag coefficient) value of 0.17, the EQXX clocked a run time of 14 hours, 30 minutes in the 30°C European summer heat with the air-con running for eight hours, achieving 83 kmph of average speed and a power consumption of 8.3 kWh per 100 km. The bar has been set high. ■
