

THE GREEN DRIVE PROJECT

THE DRIVE TO A GREEN FUTURE

Auto Today SETS OUT ON A MASSIVE PLANTATION DRIVE COVERING THE ENTIRE COUNTRY TO SPREAD AWARENESS ABOUT THE ENVIRONMENT

The Green Drive Project, a collaborative effort by *Auto Today* and Mahindra, partenering with leading automotive journalists and publications, aims to plant over 75,000 trees across the country. The project began with 24 Mahindra Scorpio-N cars travelling to the four corners of India, covering about 17,000 km with the intent of planting at least one tree every kilometre of the way. The journey's northern leg heads towards the Nubra Valley in Ladakh; the southern leg heads to Kanyakumari, Tamil Nadu; the eastern leg travels to Kaho village in Arunachal Pradesh; while the western convoy goes to Lakhpat, Gujarat. En route, various Mahindra dealerships will pledge donations to an NGO, Sankalptaru, which will take up the responsibility of planting over 75,000 trees and nurturing them during their initial years. This initiative comes at a crucial time with growing public concern over global warming. With cars like the new Mahindra Scorpio-N, internal combustion engines are nearing their peak where they are cleaner than ever before even as the automobile industry shifts gear towards electric powertrains and more sustainable fuels. This initiative is our contribution to give back to nature, urging everyone to do their little bit by planting as many trees as possible. ■
