thetic approach gave place gradually to a more analytical one. We have now to lay greater stress on the synthetic aspect and make the whole world our field of study. This emphasis on synthesis is indeed necessary for every nation and individual if they are to grow out of the narrow grooves of thought and action in which most people have lived for so long. The development of science and its applications have made this possible for us, and yet the very excess of new knowledge has added to its difficulty. Specialization has led to a narrowing of individual life in a particular groove, and man's labour in industry is often confined to some infinitesimal part of the whole product. Specialization in knowledge and work will have to continue, but it seems more essential than ever that a synthetic view of human life and man's adventure through the ages should be encouraged. This view will have to take into consideration the past and the present, and include in its scope all countries and peoples. In this way perhaps we might develop, in addition to our own national backgrounds and cultures, an appreciation of others and a capacity to understand and co-operate with the peoples of other countries. Thus also we might succeed to some extent in building up integrated personalities instead of
