in their own way. But it does seem odd to me that in their enthusiasm for the artificial product, people should forget natural manure and even waste it and throw it away. Only China, as a nation, has had the good sense to make full use of the natural stuff. Some experts say that artificial fertilisers, though producing quick results, weaken the soil by depriving it of some essential ingredients, and thus the land grows progressively more sterile. With the earth, as with our individual lives, there is far too much of burning the candle at both ends. We take her riches from her at a prodigious pace and give little or nothing back.

We are proud of our increasing ability to produce almost anything in the chemical laboratory. From the age of steam, we proceeded to that of electricity and now we are in an age of biotechnics and electronics. The age of social science, which we hope will solve many of the intimate problems that trouble us so much, looms ahead. We are also told that we are on the threshold of the magnesium-aluminium age and as both these metals are extremely abundant and universally distributed, there
