We have therefore to function in line with the highest ideals of the age we live in, though we may add to them or seek to mould them in accordance with our national genius. Those ideals may be classed under two heads: humanism and the scientific spirit. Between these two there has been an apparent conflict but the great upheaval of thought to-day, with its questioning of all values, is removing the old boundaries between these two approaches, as well as between the external world of science and the internal world of introspection. There is a growing synthesis between humanism and the scientific spirit, resulting in a kind of scientific humanism. Science also, while holding on to fact, is on the verge of other domains, or at any rate, has ceased to deny them contemptuously. Our five senses and what they can perceive, obviously, do not exhaust the universe. During the past twenty-five years there has been a profound change in the scientist's picture of the physical world. Science used to look at nature as something almost apart from man. But now, Sir James Jeans tells us that the essence of science is that 'man no longer sees nature as something distinct from himself.' And then the old question arises which troubled the thinkers of the Upanishads: how can the knower be known?
