hold of vast changes. A new spirit, a new ferment, was at work sending her adventurers across the oceans and turning the minds of her thinkers in novel directions. The Renaissance had done little for the advancement of science; to some extent it turned people away from science, and the humanistic conservative education which it introduced in the universities prevented the spread of even well-known scientific ideas. It is stated that the majority of educated English people, as late as the middle of the eighteenth century, declined to believe that the earth rotated or that it revolved round the sun, in spite of Copernicus, Galileo, and Newton; and the manufacture of good telescopes. Bred up in the Greek and Latin classics, they still clung to Ptolemy's earth-centred universe. That eminent English statesman of the nineteenth ceruury, Mr. W. E. Gladstone, in spite of his deep erudition, neither understood nor was attracted to science. Even to-day probably there are many statesmen and public men (and not in India only) who know little of science or the scientific method, though they live in a world governed by the applications of science and themselves use it for large-scale slaughter and destruction. The Renaissance had, however, released the mind of Europe
