All this upheaval of thought, due to the advance of science, has led scientists into a new region, verging on the metaphysical. They draw different and often contradictory conclusions. Some see in it a new unity, the antithesis of chance. Others, like Bertrand Russell, say, 'Academic philosophers ever since the time of Parmenides have believed the world is unity. T h e most fundamental of my beliefs is that this is rubbish.' Or again, ' M a n is the product of causes which had no prevision of the end they were achieving; his origin, his growth, his hopes and fears, his loves and beliefs are but the outcome of accidental collocations of atoms.' And yet the latest developments in physics have gone a long way to demonstrate a fundamental unity in nature. ' T h e belief that all things are made of a single substance is as old as thought itself; but ours is the generation which, first of all in history, is able to receive the unity of nature, not as a baseless dogma or a hopeless aspiration, but a principle of science based on proof as sharp and clear as anything which is known.'* Old as this belief is in Asia and Europe, it is interesting to compare some of the latest conclusions of science with the fundamental ideas underlying the Advaita Vedantic theory. These
