had changed the whole science of war. Even the most ignorant Englishman who came to India saw different parts of the world in the course of his journey. In England itself great discoveries were being made, heralding the industrial revolution, though perhaps few ralised their far-reaching significance at the time. But the leaven of change was working powerfully and influencing the people. Behind it all was the expansive energy which sent the British to distant lands.

Those who had recorded the history of India are so full of wars and tumults and the political and military leaders of the day, that they tell us very little of what was happening in the mind of India and how social and economic processes were at work. Only occasional and accidental glimpses emerge from this sordid record. It appears that during this period of terror the people generally were crushed and exhausted, passively submitting to the decrees of a malevolent fate, dazed and devoid of curiosity. There must have been many individuals, however, who were curious and who tried to understand the new forces at play, but they were over-whelmed by the tide of events and could not influence them.
