We fixed a ten-year period for the plan, with control figures for different periods and different sectors of economic life.

Certain objective tests were also suggested:

(1) The improvement of nutrition—a balanced diet having a calorific value of 2,400 to 2,800 units for an adult worker.

(2) Improvement in clothing from the then consumption of

about fifteen yards to at least thirty yards *per capita* per annum.

(3) Housing standards to reach at least 100 square feet *per capita.*

Further, certain indices of progress had to be kept in mind:

(i) Increase in agricultural production, (ii) Increase in industrial production, (iii) Diminution of unemployment, (iv) Increase in *per capita* income, (v) Liquidation of illiteracy, (vi) Increase in public utility services, (vii) Provision of medical aid on the basis of one unit for 1,000 population, (viii) Increase in the average expectation of life.

T h e objective for the country as a whole was the attainment, as far as possible, of national self-sufficiency. International trade was certainly not excluded, but we were anxious to avoid being
