and avoid many of its dangers. This planning is necessary to-day in all countries of arrested growth, like China and India, which have strong traditions of their own.

In China I was greatly attracted to the Industrial Co-operatives—the Indusco movement—and it seems to me that some such movement is peculiarly suited to India. It would fit in with the Indian background, give a democratic basis to small industry, and develop the co-operative habit. It could be made to complement big industry. It must be remembered that, however rapid might be the development of heavy industry in India, a vas field will remain open to small and cottage industries.

Even in Soviet Russia owner-producer co-operatives have played an important part in industrial growth.

The increasing use of electric power facilitates the growth of small industry and makes it economically capable of competing with large-scale industry. There is also a growing opinion in favour of decentralization, and even Henry Ford had advocated it. Scientists are pointing out the psychological and biological dangers of loss of contact with the soil which results from life in great industrial cities. Some have even said that human survi-
