zons, are necessary. Thus we will change the static character of our living and make it dynamic and vital, and our minds will become active and adventurous. New situations lead to new experiences, as the mind is compelled to deal with them and adapt itself to a changing environment.

It is well recognized now that a child's education should be intimately associated with some craft or manual activity. The mind is stimulated thereby and there is a co-ordination between the activities of the mind and the hands. So also the mind of a growing boy or girl is stimulated by the machine. It grows under the machine's impact (under proper conditions, of course, and not as an exploited and unhappy worker in a factory) and opens out new horizons. Simple scientific experiments, peeps into the microscope, and an explanation of the ordinary phenomena of nature bring excitement in their train, an understanding of some of life's processes, and a desire to experiment and find out instead of relying on set phrases and old formulae. Self-confidence and the co-operative spirit grow, and frustration, arising out of the miasma of the past, lessens. A civilization based on ever-changing and advancing mechanical techniques leads to this. Such a civi-
