War Production is Diversion f r o m Normal Production

Heavy industry was represented in India by the Tata Iron and Steel Works at Jamshedpur. There was nothing else of the kind

and the other engineering workshops were really j<Jbbing shops. Even the development of Tatas had been slow because **of Gov-**ernment policy. During World War I, when there was a shortage of locomotives and railway carriages and wagons, Tatas decided to make locomotives and, I think, even imported machinery for the purpose; but when the war ended, the Government of India and the Railway Board (which is a department of the central government) decided to continue their patronage of British locomotives. There is obviously no private market for locomotives, as the railways were either controlled by Government or owned by British companies, and so Tatas had to give up the idea of making locomotives.

The three fundamental requirements of India, if she is to develop industrially and otherwise, are a heavy engineering and machine-making industry, scientific research institutes, and electric power. These must be the foundations of all planning, and
