INTO THE SPIDER-VERSE

A Ferrari with a V6 engine that's a plug-in hybrid and isn't even built around a carbon fibre tub—the 296 GTS brings with it all kinds of contrasting emotions. The blue livery work on this two-seater spider (convertible) is a homage to the 250 LM and exclusive to the Assetto Fiorano pack available on both the 296s. In short, that means carbon fibre appendages on the bumper, interiors and the dash, and GT racing-derived adjustable Multimatic shock absorbers. The pièce de résistance is the powertrain—the 2.9-litre twin-turbo V6 hybrid that gives the 296 its name and helps it achieve 200 kmph in 7.6 seconds. In pure EV mode, this Ferrari can drive up to 25 km and do speeds up to 135 kmph from a 164 bhp onboard electric motor.
