initiative now covers even advanced tests like CT scans and MRIs.

Mukhyamantri Nishulk Jaanch Yojana was launched in phased-manner. The first phase was started on April 7, 2013 in the hospitals attached to the medical colleges and in district hospitals. On the success of this scheme, CHC was linked to this scheme on July 1, 2013, in the second phase and the third phase was started on August 15, 2013, including the PHCs and dispensaries.

Currently, 1.25 lakh to 1.50 lakh tests are done daily in the state and lakhs of patients are being benefitted. Daily 1033 types of tests are done in Sawai Man Singh (SMS) hospital, the biggest government hospital in north India in Jaipur and hospitals attached to it. Similarly, 689 tests are done at Ajmer, Udaipur, Bikaner, Jodhpur, Kota Medical Colleges and RUHS, while 56 tests are done in RajMES medical colleges and district hospitals, sub district hospitals and satellite hospitals. Even 37 tests are done at the CHCs and 15 tests in PHCs and dispensaries. This shows as how this scheme has been expanded across the state that patients residing in any part do not face any kind of problem and are not deprived of getting the tests done.

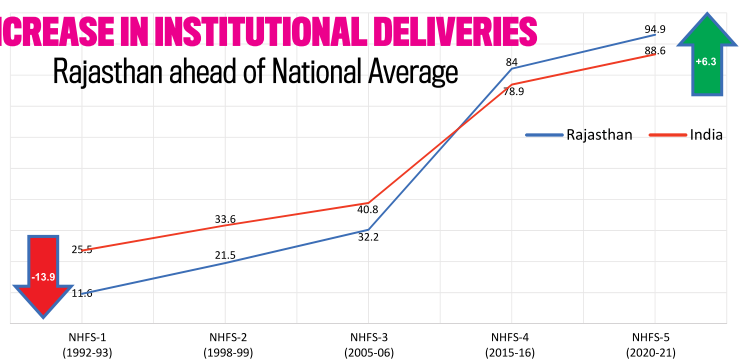

Rajasthan spearheaded free testing initiatives, becoming the first state to introduce such schemes. In 2013, Chief Minister Ashok Gehlot expanded upon the success of the free medicine scheme by launching the free tests scheme. Originally offering 271 tests, this initiative now covers even advanced tests like CT scans and MRIs.

More than 57.87 crore tests have been done from April 7, 2013 till June 30, 2023 and more than 23.23 crore people have been benefitted. Rajasthan stands first in the country in this scheme. A special arrangement was made for the budget so that conducting tests are not affected for the want of money. In this scheme, Rs 4932.62 crore was kept from April 2013 to financial year 2023-24 of which till now Rs 2260.25 crore have been spent. A total of Rs 345.45 crore has been kept for free tests scheme for the year 2023-24, out of which Rs 70.38 crore have been spent till June 30, 2023. In the third tenure of the present Gehlot government, Rs 1296 crore has been spent on this scheme till now. More than 11 crore patients have been benefitted and more than 31.95 crore tests have been done.

The success of this scheme is hidden in its flexibility. Practical methods have been adopted to overcome petty hindrances. Mostly x-rays are done in the name of tests. Looking to the shortage of radiologists in the state, the work of tests was outsourced at a few places, so that patients do not face the brunt. For this, tele-radiology x-ray reporting technique was adopted and was done through outsourcing at 54 hospitals including district, sub district and

INCREASE IN INSTITUTIONAL DELIVERIES

Rajasthan ahead of National Average

The rate of Institutional Delivery (that is delivery in any hospital or health institution) in Rajasthan is higher than the national average and also compared to other states. According to National Family Health Survey-5 (NFHS 2019-21), the institutional deliveries in the state were recorded 94.9%.
