

PLEASE CONTACT HELPLINE 181 TO GIVE INFORMATION ABOUT ADULTERATION OR TO LODGE A COMPLAINT.

process is underway. Written exams and interviews for 98 positions have been conducted, while exams for 200 positions have been held, and the demand for the remaining 100 posts has been sent to RPSC. Now for the checking of adulteration, there was a need for laboratories for which the Gehlot government approved 7 new Public Health Food Laboratories. The building for laboratory has been built at Sikar, Baran, Barmer, Nagaur, and Sriganganagar. It is being said that the laboratory will be completed by the end of September in Bhilwara and Dholpur. With this, Rajasthan will become the first state to have a large number of laboratories for food safety. Beside this 25 new mobile laboratories has been set up so that at least one mobile laboratory has started functioning in each district. The campaign has gained pace and the facility is now available to check adulteration of the seized items on the spot. With this initiative, Rajasthan will lead the nation with a substantial number of food safety laboratories. Additionally, each district now operates at least one mobile laboratory. Part of the campaign involves registering and licensing food traders, a year-long effort that involved approximately 500 camps, registering over 1.45 lakh food traders. During this period, 2,830 adulteration cases were brought to court, resulting in fines exceeding Rs 8 crore. Over 2 lakh kilograms of adulterated items were destroyed, setting a notable record.

To amplify the campaign's impact, an Informer Scheme was introduced. Informants remain anonymous and receive a reward of Rs 51,000 for providing information leading to the discovery of adulterated items. If samples fall below purity standards, informants receive Rs 5,000. To date, 35 informants have been rewarded, and six cases are in court. This innovative approach has yielded promising results.

Looking ahead, plans are underway to establish Organic Food Testing Labs in all 7 divisions of the state. Additionally, a laboratory dedicated to testing honey samples will be introduced in Sriganganagar, and a Food Microbiology Testing Lab is set to begin operation by October 2023. Rajasthan's significant progress over the past three years is evident. The state rose from the 18th position in the Food Safety Index in 2021 to the 8th position in 2022-23.
