REVOLUTIONIZING HEALTHCARE: THE TALLEST IPD TOWER

A LANDMARK FOR MEDICAL FACILITIES IN INDIA

A monumental project is underway in the Sawai Man Singh hospital premises in Jaipur, set to become the tallest In-Patient Department (IPD) tower in India. With a budget of Rs 588 crore, Chief Minister Ashok Gehlot is personally overseeing the tower's construction. The IPD tower is a 24-storied structure with a capacity for 1,200 beds, equipped with state-of-the-art medical facilities.

One of the tower's remarkable features is a helipad for air ambulances, designed to transport critical patients. This helipad innovation represents a pioneering step, potentially ferrying general patients, unlike traditional air ambulances. In the year 2023-24, a provision has been made for Rs 160 crore to provide equipment for the IPD Tower and for Rs 40 crore to provide equipment to the Institute of Cardiology.

The project encompasses ultramodern facilities, including 100 OPD counters, 20 operation theatres, 150 cottages, 166 ICUs, and 92 premium beds. Apart from this there will be two-storied basement parking.

The project encompasses ultramodern facilities, including 100 OPD counters, 20 operation theatres, 150 cottages, 166 ICUs, and 92 premium beds. Apart from this there will be two-storied basement parking. Two big waiting halls will be there for the family members of the patients, medical science gallery, 20 operation theatres, food court along with advance labs related to radio and microbiology tests. The entire project will be completed in two phases. With advanced labs and medical units, the IPD tower aims to provide comprehensive medical care, streamlining patient services. The tower's completion will alleviate the burden on the Sawai Man Singh hospital, which caters to around 15,000 OPD patients daily.

The IPD tower is a testament to Rajasthan's commitment to healthcare advancement and innovation, elevating patient care and medical research to new heights.
