

EXEMPLARY COVID-19 MANAGEMENT
BHILWARA AND RAMGANJ MODELS

Admiration for Rajasthan's Approach to Pandemic Management

During the onset of the COVID-19 pandemic, Rajasthan's proactive response, particularly the Bhilwara and Ramganj Models, garnered attention across India and beyond. Chief Minister Ashok Gehlot's leadership during this time received praise, even from Prime Minister Narendra Modi. The state's efficient handling of the crisis set an example for the world, with the Bhilwara and Ramganj Models being adopted internationally.

In response to the pandemic's outbreak in Ramganj, Jaipur, the state government swiftly initiated a door-to-door testing campaign. The administration effectively utilized public representatives to identify and support COVID-19 patients. Chief Minister Ashok Gehlot through video conferencing spoke to the political parties, spiritual leaders, industrialists, and NGOs. He also spoke to ex-servicemen, media persons, sanitation personnel, policemen, sarpanchs-panchs, employee organisations, and patwaris. He had virtually interacted for more than 500 times, which had a positive effect on people working to prevent the spreading of Covid by risking their lives. Such kind of human management at the time of a pandemic like

Even black fungus had hit hard during the covid period. Rajasthan was the first state to schedule this disease as a pandemic. Later other states followed it. By doing this, it was possible to treat the patients of black fungus in a better manner and its spread was arrested to a great extent.

Covid proves beneficial. Covid started in Ramganj in Jaipur. It was the time when the covid victim was scared to come forward. The Gehlot government sent the nursing staff for door-to-door testing. The help of public representatives was taken. People were taken out of their houses and got them admitted to the hospitals. An officer at the collector's office in Bhilwara was deployed to hear the complaints of the people. Even the district administration sent vegetables to the doorstep of people. In the initial stage, 27,000 teams were formed to identify people affected with covid. During the door-to-door survey, more than 18,000 medicine kits were distributed. OPD and free medical facilities were provided to the general public through 350 mobile medical units. This arrangement was done so that people suffering from any other diseases do not have to go to hospital during the covid period where there was a risk of getting infected by corona. Moreover, the provision of essentials to households and widespread testing helped contain the virus's spread.

Even black fungus had hit hard during the covid period. Rajasthan was the first state to schedule this disease as a pandemic. Later other states followed it. By doing this, it was possible to treat the patients of black fungus in a better manner and its spread was arrested to a great extent. It was announced to treat black fungus free of cost and standards were fixed for the hospitals to treat this disease. The state government authorised 38 government and private hospitals to treat this disease and these hospitals were linked with the Mukhyamantri Chiranjeevi Scheme.

A welfare scheme was started for the children who lost both their parents to covid. A provision was made to give compensation of Rs 50 lakh to the family members of the deceased. Similarly, ex-gratia of Rs 50 lakh was given in case of death of non-medical state personnel. Till now, 183 dependent families have been given the assistance amount.

PROMOTING ORGAN TRANSPLANTS IN RAJASTHAN
RAJASTHAN'S REMARKABLE PROGRESS IN ORGAN DONATION

In another significant stride, Chief Minister Ashok Gehlot launched the Organ Donation fortnight campaign on August 3. This initiative aims to promote organ donation across Rajasthan, highlighting its importance in saving lives. The Chiranjeevi Scheme, initiated by the government, offers free organ transplant treatments, making this critical healthcare accessible to all.

Chief Minister Gehlot holding a dialogue with the family members of organ donors took a positive initiative. Shayar Mal said that his 20-year-old son was declared brain dead and the family donated both his kidneys and liver. Mohan Lal Meena said that his father donated him a kidney and it was transplanted under the Chiranjeevi Scheme. Dhauli Devi of Alwar underwent a heart transplant in the Chiranjeevi Scheme.

The state government is emphasising to bring out the stories of the families donating organs because such stories inspire others to organ donation. Doctors associated with organ donation campaigns were motivated by felicitating them. The need is felt to create awareness about organ donation through films and the Rajasthan government is working on it.
