

INDORE

A CROWN JEWEL AMONG THE SMART CITIES OF INDIA

The goal of Indore City is to become a premier smart commercial metropolis that encourages business incubation, investment possibilities, and inclusive growth. With this objective in mind, Indore Smart City Establishment Limited (ISCDL) has designated 742 acres of land for the establishment of a smart city focused region. ISCDL will employ a participative and analytical approach to raise the city's general quality across a variety of sectors.

HERITAGE CONSERVATION

Under the Heritage Conservation programme, the city collaborated with IIT Madras to repair significant landmarks like Gandhi Hall, Rajwada Palace, Gopal Mandir, Krishna Pura Chhatri, and Boliya Sarkar ki Chhatri, as well as to improve public areas. Every Sunday at 10 monuments and 2.49 kilometres in length, Indore City offers educational heritage walks. Four specifically hired historians provide accurate information.

GOOD GOVERNANCE

With the use of quick-resolution systems, ITMS, ICCC, computerised building permissions, and other tools, Indore is serving as a model for effective government. 39 modules with multilingual features for grievance redress, message broadcasting of important information, sabji Kirana Order Facility in Covid, enabling citizens to receive soft copies of Birth & Death Certificates, etc. are included in the Indore 311 Application, which is operational. The city has used a creative method to identify 500+ potential green open spaces and has worked with WRI India to develop the areas through interdepartmental site visits.

In order to monitor and connect with various municipal services, as well as to receive real-time data from recently installed ITMS systems, Sewerage Treatment Plant (STP) SCADA, Integrated Solid Waste Management, and Indore 311 (Citizen Grievances and Redressal System), among other sources, Indore Smart City has set up a one-of-a-kind Integrated Command Control Centre System (ICCC). This data is synced and used for governance.

TECHNOLOGY

The 500+ green open areas in Indore Smart City are mapped using property tax data collected using a GIS. Indore Smart City also works with WRI India and has an Integrated Command Control Centre System (ICCC) to track municipal services, collect real-time data, and use it for governance.

PLACE MAKING

Four Placemaking Marathons in Indore have resulted in more than 30 modifications in a variety of areas, including parks & open spaces, streets, markets, art installations, heritage preservation, Anganwadi development, and amenities geared towards children & women.

SAFE AND GREEN MOBILITY

The city is improving non-motorized and public transportation, converting transit vehicles to bio-CNG and electric vehicles, and introducing 400 bio-CNG-fueled buses. Over 3500 people have been taught as part of the "Safe City Programme" by Atal Indore City Transport Services Limited, which has established more than 100 bicycle sharing stations.

EDUCATION, HEALTH & HYGIENE

Through initiatives like the Ladli Laxmi Scheme, Indore Smart City is empowering girls and advancing education. The "Covid-19 App" and Indore 311 App, supported by a 24x7 Call Centre and over 200 covid-trained operators, helped the city win an award for Covid 19 mitigation. In addition to converting a trenching ground into a thickly planted garden, the city demonstrated creative methods for constructing clean vending and eating places.

CLIMATE RESILIENCE

In order to reduce heat island and flooding difficulties, Indore plans to build 100+ open spaces with dense plantation and facilities. Over 7.5 lakh saplings would be planted. In addition to recharging water sources, the city has rehabilitated 455 wells, 25 stepwells, and 10 lakes. It has also earned the 'Best Smart City' award for waste management and sustainable sanitation practices. In collaboration with Jon Snow India, CII, and WRI India, Indore is also enhancing air quality with the help of three CAAQMS and fifty inexpensive air quality sensors. 'Indore Clean Air Action Plan' has been adopted by the city. With the help of the "Solar City" programme, it has been recognized as the cleanest city for six years. Under the Nurturing Neighborhoods Challenge, flood-prone areas are being turned into useful spaces. 33 industries are switching to PNG-based, zero-emission technologies.

CITIZEN CENTRIC APPROACH

The distinctive strategy used in Indore entails involving locals in all stages of development, planning events for over 5000 people, and working with NGOs and stakeholders. The creation of citizen forums by government organizations has resulted in 183 demonstrations, street dramas, seminars, digital hoardings, cyclothons, radio campaigns, webinars, community talks, and marathons.

INCLUSIVITY

The city is focusing on inclusive development, considering age, gender, socio-economic backgrounds, and abilities. It plans to build affordable housing under AWAS, for the rehabilitation of EWS, and micro-economic cycles. The Nurturing Neighborhoods Challenge aims to develop 40 all ability parks, and the Safe City Program aims to create a safe place for women.

ECONOMIC GROWTH

In order to improve public infrastructure and make the city self-sufficient, Indore has embraced the Value Capture Financing approach. In order to provide nature-based street furniture and public space items for the Nurturing Neighborhoods Challenge, the government established India's first and only carpentry workshop. Over 1500 components have been created and placed so far throughout the city. The goal of the "Indore Smart Seed Incubation Centre" project is to make Indore the "Startup Capital of Central India."'
