benchmarking, evaluation, repair and re-export, and product development.

With the rise in digitisation, the demand for computers and laptops in India has grown exponentially. In the past decade, annual imports in this segment jumped from $1.5 billion (Rs 12,392 crore) to $5.3 billion (Rs 44,179 crore). Imports were at $7.4 billion (Rs 60,395 crore) in 2021-22. As much as 70-80 per cent of the imports in this segment are from China. According to a report by economic think-tank Global Trade Research Initiative, India's imports from China are mostly in three key product categories—electronics, machinery and organic chemicals. India needs to rely on China for essential day-to-day items and industrial
