DR NARESH TREHAN, 77

CMD, MEDANTA-THE MEDICITY

Illustration by **SIDDHANT JUMDE**

Cutting Edge

BECAUSE Dr Trehan's search for solving complex medical conditions at a single hospital in India is finally being realised. Medanta in Gurugram, Haryana, has successfully completed a three-way liver transplant swap (or paired swap), which saved the lives of three patients. It also did a robotic kidney transplant last year. *Newsweek International* declared Medanta the best private hospital in India for the fourth year running

BECAUSE Medanta has been helping the Haryana government realise its goal of eliminating tuberculosis (TB) by 2025. The hospital has set up mobile vans equipped with digital X-ray and molecular technologies for remote and quick diagnosis. It has also taken up door-to-door active case detection and awareness campaigns in rural areas

ALWAYS ACCESSIBLE **A popular figure with a wide social circle, he is known for taking calls—even from unknown numbers—at all hours**

BECAUSE Medanta has developed its own algorithm for predicting disease outcomes. Instead of simply focusing on generic preventive health advice, the hospital offers patients a chance to see if they are at high risk for cardiac disease, diabetes or cancer through a series of genetic tests, lifestyle diagnosis and various other markers. This offers patients the option to receive medical advice personalised to their particular condition

BECAUSE when Medanta opened its IPO in November 2022, it received cumulative bids 9.6 times the offer size of 46.7 mn equity shares. It is now the country's largest IPO in the hospital sector
