Cold Steel Corporation – Trailblazers in Pre-Engineered Buildings

In 1977, Rajwansh Bedi introduced the concept of Pre-Engineered Buildings in India. An idea much ahead of its time, it delivered benefits that companies were not accustomed to. Over a period of time, Cold Steel Corporation has become synonymous with this genre enjoying a great brand recall and an expanding clientele.

Rajwansh Bedi
Founder of Cold Steel Corporation

A qualified Mechanical Engineer, Rajwansh Bedi is an alumni of the Thapar Institute Of Technology, Patiala. After passing out with distinction he followed it up with a post graduate diploma in aeronautical sciences from A.F.T.C. and an advanced management diploma, from Staff College, Bangalore. Starting his career in 1970 as an engineer at Hindustan Aeronautical Limited (HAL), he gained priceless experience of working with cutting edge technology. He further trained in the areas of Stress analysis, Cold roll forming and Welding technology at Ayershire England and Ufalex France respectively.

Considered the founding father of the Pre-Engineered Steel Building industry of India, he introduced and executed this concept in India as early as in 1977. He established his business in Alwar Rajasthan in 1981 with a modest capital and grew it into the leading PEB Company of India. Across the past 5 decades, his company has been innovating and providing much needed solutions to the industry, emerging as the market leader in its segment.

In today's day and age, when resources are premium and the time to set up the project is limited, pre-engineered steel buildings emerge as the most effective answer and viable solution. Along with being highly cost effective, the time taken to construct a multi-storey building in steel is minimal, saving precious project 'set–up' time. With depleting natural resources, steel buildings offer the best option of a completely dry and mechanized way of construction making it a green and environment friendly way of construction.

Until recently, steel construction was associated with industrial buildings. Now, with the rising economy and multinational companies entering the country, new buildings whether residential, commercial, retail, hospitality or IT parks are all opting for steel buildings for the ease of construction, design and look it brings in. Multi-story pre-engineered steel buildings can accommodate a wide range of functions and can adapt to a wide range of architectural styles.

India is estimated to boast of 20.44 billion square feet of Pre-Engineered Buildings by 2030. With its first mover advantage, Cold Steel Corporation has already completed more than 2000 Major PEB Projects till date. Having the widest range of PEB systems and offering comprehensive building solutions, including foundation designs, pre-engineered steel structures, roofing and side sheets/cladding, complete accessories and installation, it has emerged as the primary choice in PEB manufacturers. It is all set to corner the lion's share in this emerging market.

Cold Steel Corporation also provides total turnkey solutions, right from the foundation designs to the completely installed building. It has been the technology demonstrator in the multi storey steel building industry, constructing the Famous 26 Floor building in New Delhi in the early 90s.

Cold Steel Corporation has expanded beyond the Indian shores, with more than a dozen major projects abroad to its credit. It is looking at sustained business opportunities in the North American markets. With a strong war chest, it is one of the very few enterprises in the area of infrastructure today, which is entirely self-financed and 100% Debt-Free. With an overall installed capacity of 80,000 Metric Tons Per Year and 75,000 Sq. meters of entirely automated plants including a state-of-the-art facility for manufacturing premium quality Aluminium Foil Bubble Wrap Insulation, Cold Steel Corporation is one of the largest PEB manufacturers today.

The company is committed to delivering top quality building solutions, with continuous and ongoing investment in people, products and technology. An honorary Fellow of the Indian Institute of Structural Engineers, Rajwansh's vision is satisfying the evolving needs of the market, delivering safety and lifestyle in the process.
