Gaya, it is largely from works created during those centuries of Gupta reign that we can see the coming together of a unified style of Indian architecture.

The Gupta dynasty grew in terms of territory following the reign of Chandragupta I, succeeding into the hands of family members for nearly a century and a half until the Huns, a nomadic Asian tribe, invaded in the latter part of the 5th century. Fundamentally weakened, Gupta kings persisted in governing their small remaining lands, but ultimately, the empire faded out of existence after 550 CE. Dozens of rock-cut caves from this time can still be visited today.
