E-WASTE TOXINS

LEAD

Source: Printed circuit boards, cathode ray tubes, light bulbs, TVs, batteries

Threat: Toxic to peripheral nervous, blood and urinary systems

MERCURY

Source: Thermostats, sensors, monitors, cells, printed circuit boards, fluorescent light sources, LCD screens

Threat: Impacts urinary, reproductive and nervous systems

LITHIUM

Source: Batteries

Threat: Neurological ailments from fumes

CADMIUM

Source: Printer inks, toners, photocopiers, switches, connectors, printed circuit boards, batteries, semiconductor chips, cathode ray tubes, cellphones

Threat: Long-term cumulative poison that is carcinogenic

PLASTICS

Source: Cases, casings, printed circuit boards

Threat: Release of carbon monoxide and hydrogen cyanide can affect lungs, brains and heart

NICKEL

Source: Batteries, cathode ray tubes

Threat: Can cause cardiovascular and kidney diseases, lung fibrosis

BARIUM

Source: Cathode ray tubes, fluorescent lamps

Threat: Gastrointestinal toxicity

BERYLLIUM

Source: Power supply boxes, computers, X-ray machines, ceramic components

Threat: Lung damage

CHROMIUM

Source: Anti-corrosion coatings, data tapes

Threat: Respiratory, pulmonary and dermatological
